

1. Appliaction UI which contains Connect Jira button which will allow user to connect with jira

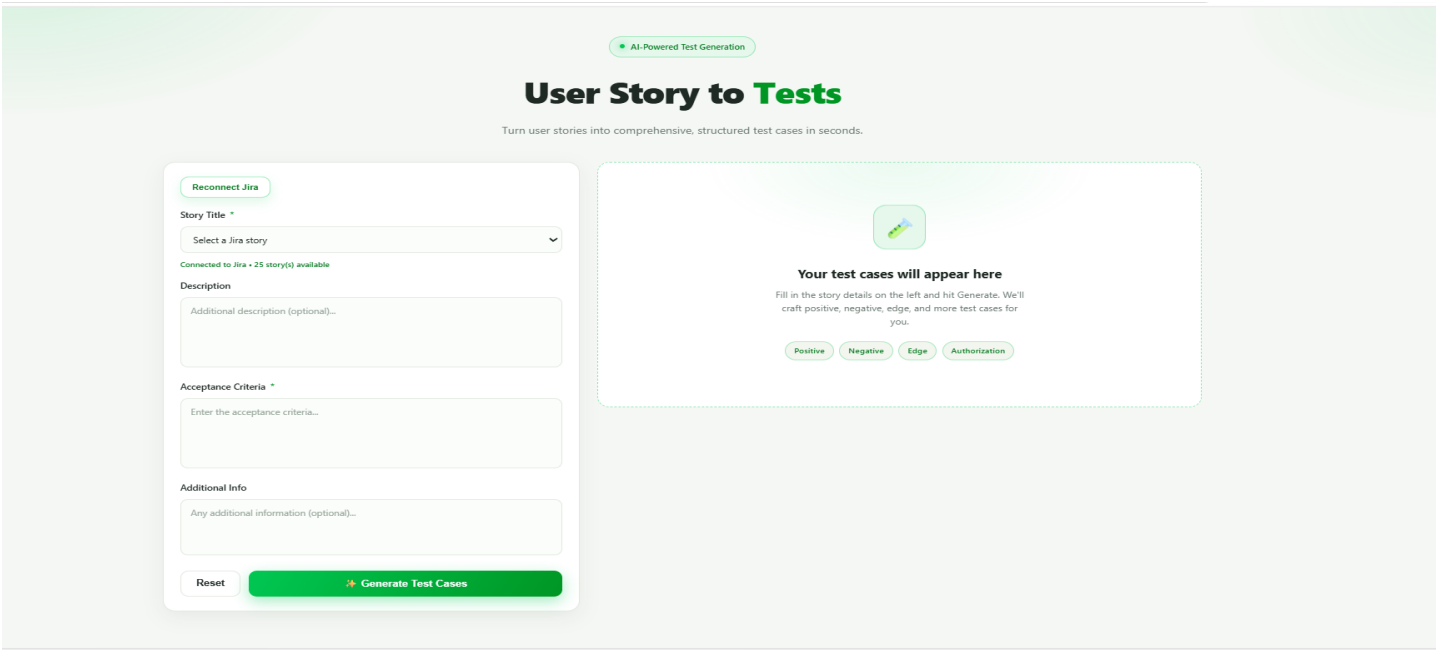

2. When user click on “Connect Jira” button a dialog box will be displayed, here user will enter Base url, Email ID and Jira API Token

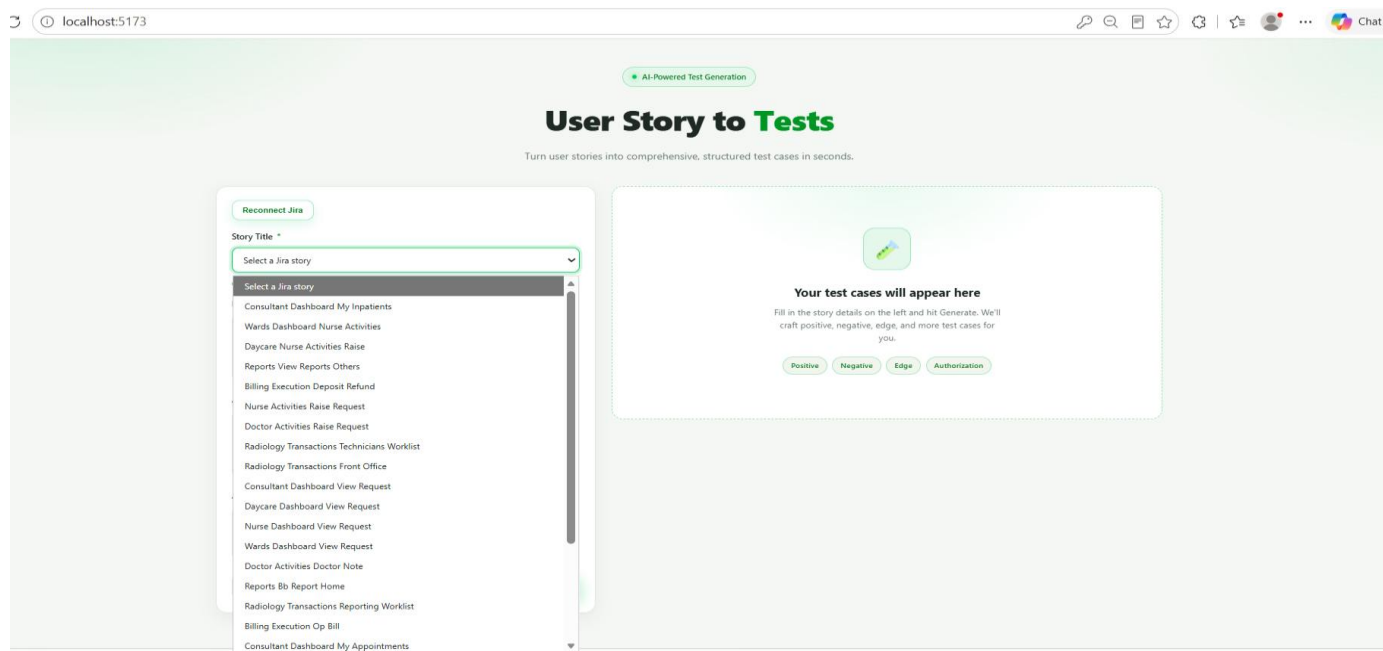

3. Once user populate all details then user click on “Submit” button to establish the connection between Jira and application such that it will fetch all stories in application

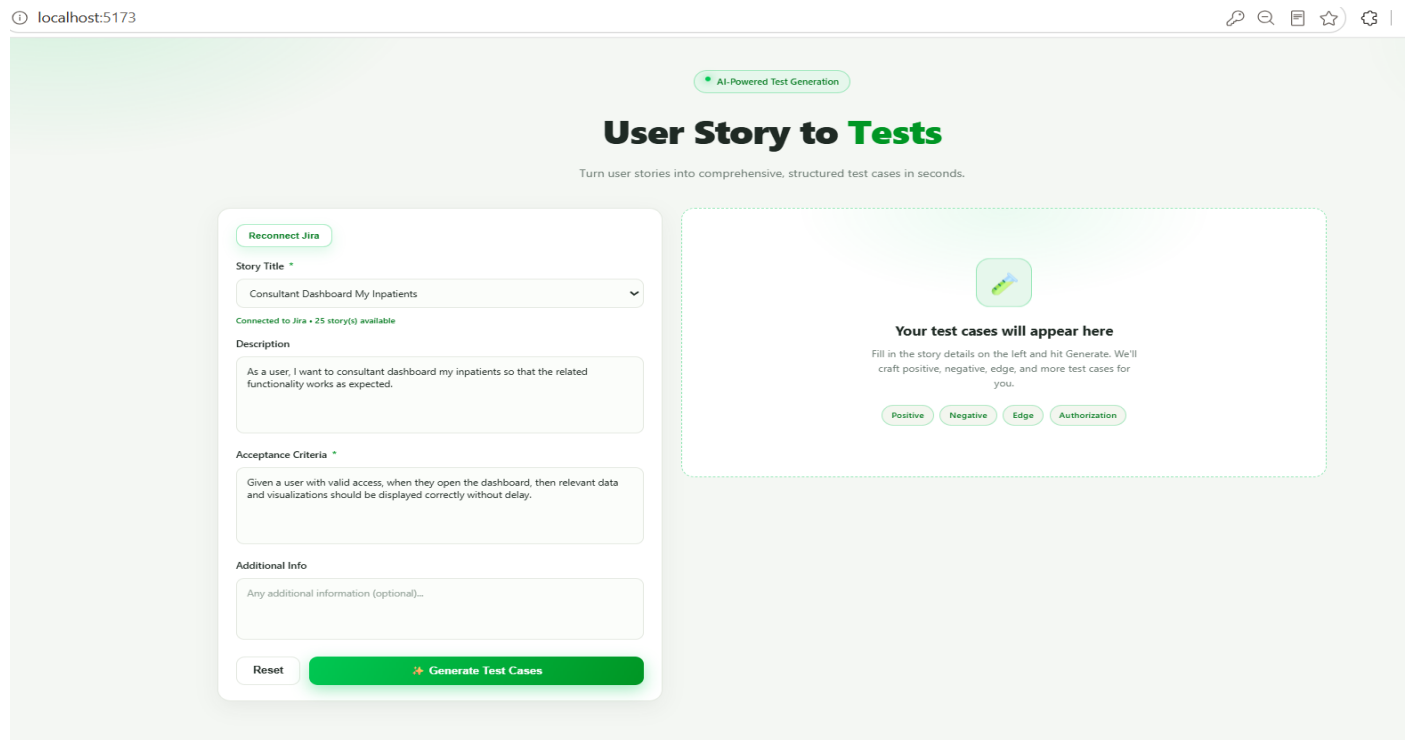

4. After successful connection the title of “Connect Jira” button will be converted to “Reconnect Jira”

5. Now “Story title” field will contain all list of stories from jira

6. When user select any story, details related to that story will be fetched from Jira

7. Click on “Generate Testcases” button to generate testcases

Story Title *
Consultant Dashboard My Inpatients

Connected to Jira • 25 story(s) available

Description
As a user, I want to consultant dashboard my inpatients so that the related functionality works as expected.

Acceptance Criteria *
Given a user with valid access, when they open the dashboard, then relevant data and visualizations should be displayed correctly without delay.

Generated Test Cases

9 test case(s)Model: openai/gpt-oss-120bTokens: 1687

TEST CASE ID	TITLE	CATEGORY	EXPECTED RESULT
TC-001	Display inpatient data for authorized consultant	Positive	The dashboard loads within 2 seconds and displays a list of the consultant's inpatients along with correct visualizations (charts, counts) matching the backend data.
TC-002	Refresh inpatient data without delay	Positive	Data and visualizations are reloaded within 2 seconds and reflect any changes made to inpatient records.
TC-003	Access denied for user without consultant role	Authorization	The system displays an authorization error message and prevents access to the 'My Inpatients' view.
TC-004	Session timeout redirects to login	Authorization	User is redirected to the login page with a session timeout notification.
TC-005	Empty state when consultant has no inpatients	Edge	The dashboard shows an appropriate empty-state message (e.g., 'No inpatients assigned') and no charts are displayed.
TC-006	Handle large inpatient list with pagination	Edge	The list is paginated or virtual-scrolled, loads within 3 seconds, and navigation between pages works without errors; visualizations summarize data correctly.
TC-007	Dashboard load performance under load	Non-Functional	All dashboard loads complete within 2 seconds, meeting the performance SLA.

8. When user click on “Reset” button both input and output side of data will get cleared but jira will remain connected and “Story Title” field will be set to default value
